

C++2: Lesson 3 – Interview

1. Add **summary** at the top, **documentation** at the bottom and **comments** where necessary.
- Recordings and interviews are an exception, but they should be included in your submission code.
2. **Cite** the source of your information.
3. Refrain from including anything **you don't fully understand**.

1 **100 points**

5-min challenge: you will get full credit after you reproduce your work during a class or interview.

To calculate the area of a circle with radii of 1, 10, and 100, write a code that performs the following steps:

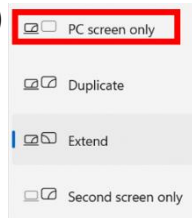

1. Create a class called "Circle" with appropriate constructors, getters, and setters.
2. Use the constructors, getters, and setters in your test code to compute the area of circles.

*Note:

-Before an interview, make sure to open your **IDE** and be prepared to demonstrate your work.

-When asked to share your screen, remember to **share the entire screen** (<https://bit.ly/3INpkJV>), not just a specific application.

- If you are using multiple screens, disconnect all screens except for the main one (Use the **Win + P** shortcut, and select "**PC screen only**") and then display the programs you are running by pressing **Alt + TAB**.

***Editing your recordings is considered cheating and will not be tolerated.**
